

Executive Summary

JewelryMallNG Website and WhatsApp AI System

Prepared for JewelryMallNG | By Hiddekel Studio | 3 September 2026 | JMNG-ES-0903 / v1.0

What we are building

We will build one system for the website, products, prices, stock, orders, payments, staff work, and WhatsApp customer support. The website, staff dashboard, and WhatsApp assistant will use the same approved business information.

What is included

- Complete identity design and its use on the new website.
- A mobile-first online store for retail and wholesale customers.
- Product variations, quantity prices, checkout, payments, stock, orders, and staff controls.
- WhatsApp AI for product questions, product matching, order guidance, and transfer to staff when needed.
- Testing, launch, staff training, handover, and 30 days of support.

Delivery period

Three weeks. The three-week period starts after the agreement is signed, the start payment and infrastructure budget are received, the required accounts are available, a usable product sample is provided, and one person is available to approve decisions.

Cost

Service fee	First-year infrastructure	Estimated first-year total
₦1,000,000	₦270,000	₦1,270,000

The ₦270,000 infrastructure amount is a budget for the first year. It is matched to the actual provider receipts. Any unused amount is returned or credited. WhatsApp messages, AI use, payment fees, and storage above free limits are paid at cost as they are used.

What is not included

Instagram and TikTok message automation, advertising, campaign management, regular content creation, product photography, packaging, printing, delivery operations, and a native mobile app are not included. They can be priced separately later.

What happens next

Review the detailed build plan. We then confirm the domain, payment method, product and wholesale rules, staff access, and the person who will approve the work. After the agreement is signed and the start payment is received, work begins.
