

Infrastructure Costs

JewelryMallNG Website and WhatsApp AI System

Prepared for JewelryMallNG | By Hiddekel Studio | 3 September 2026 | JMNG-IC-0903 / v1.2

This document explains the services that keep the JewelryMallNG system online and the budget for the first 12 months. JewelryMallNG pays each provider at cost. Hiddekel Studio does not add a markup.

Amount included in the build plan: ₦270,000

This first-year budget is already included as a line item in the ₦1,270,000 project total. It is not an additional charge on top of that total.

1. First-year budget

Service	What it does	Allowance
netcup RS 1000 G12	Runs the storefront, staff dashboard, database, order and payment logic, WhatsApp integration, AI tools, monitoring, and background work.	₦245,000
Cloudflare .com domain	Provides the selected public web address, registration, DNS integration, and renewal for one year. Exact name and availability remain subject to selection.	₦20,000
Launch storage and messaging allowance	Small allowance for off-site backup/product storage or initial transactional service usage above free tiers.	₦5,000
Total infrastructure budget	The maximum amount approved before the services are purchased.	₦270,000

2. Server cost

netcup currently lists the RS 1000 G12 with 4 dedicated AMD EPYC cores, 8 GB DDR5 ECC memory, 256 GB NVMe storage, IPv4 and IPv6, and a 12-month billing period at **€12.79 per month including 19% German VAT**. This is €153.48 for 12 months.

netcup's checkout lets the customer choose a country for VAT. Its current selector lists Other at 0%, but the actual account and checkout determine eligibility. Removing 19% VAT would produce approximately €10.75 per month, or €128.97 per year. At the planning rate of ₦1,590/€, that is about ₦205,000 without German VAT or ₦244,000 with it.

A comparable Hiddekel project paid ₦197,682.44 for an annual server order in July 2026. That is useful evidence, but it does not replace JewelryMallNG's supplier checkout. The ₦245,000 line is therefore a safe budget rather than a guaranteed invoice.

3. Domain cost

Cloudflare Registrar sells domains at the registry and ICANN wholesale cost without a Cloudflare markup. A standard .com purchased for a comparable project on 20 August 2026 cost \$10.46 and showed the same renewal quote. At the planning rate of ₦1,500/\$, that is about ₦15,700. The ₦20,000 allowance covers ordinary price, exchange-rate, and card variance.

The allowance does not guarantee that a particular name is available or non-premium. The exact JewelryMallNG name, extension, registration price, renewal price, and account ownership are confirmed before purchase.

4. Services with no separate launch charge

Item	Launch position
Cloudflare DNS, site protection, CDN, and SSL	Use the suitable Cloudflare Free services at ₦0 unless a later requirement justifies a paid plan.
PostgreSQL database	Runs on the netcup server. No separate database subscription at launch.
Application software and code hosting	Open-source application components and a suitable free private code-hosting plan.
Cloudflare R2 storage	Standard storage includes 10 GB-month, 1 million Class A requests, and 10 million Class B requests each month at no charge. Downloads from R2 to the internet are free.
WhatsApp customer-service replies	Meta currently does not charge for service replies inside the 24-hour customer-service window. Messages after an ad click are free for 72 hours.

5. Costs based on use

Service	How it is charged	How to budget
WhatsApp	Meta charges for business messages sent outside the normal customer-service reply period. The price depends on the customer's country and the type of message. A third-party provider may add its own fee.	Pay as use grows. Confirm Nigeria rates and the selected provider before launch.
AI assistant	The selected AI service charges for the information it reads and writes, including images. Some lower-priced models can also read images, but the cost depends on the number and length of conversations.	Start with a small credit, set a spending limit, and check the real cost each week.

Service	How it is charged	How to budget
Backup storage	Cloudflare R2 Standard is \$0.015 per GB-month above its 10 GB monthly allowance, plus charges for requests above the free limit.	This should be small at the start. Check product-image and backup storage each month.
Payment collection	The payment provider deducts its transaction fee from each successful sale.	A selling cost, not a fixed server bill. Confirm the provider and tariff.
Email or notifications	Transactional messages may use free allowances, credits, or per-message pricing depending on the selected provider.	Confirm after the order-notification design is approved.

Example AI cost

AI services measure the information they read and write in tokens. As of 3 September 2026, OpenAI lists GPT-5.6 Luna at \$0.20 per one million input tokens and \$1.20 per one million output tokens, with image input supported. For example, 1,000 conversations using an average of 10,000 input and 1,000 output tokens would cost about \$3.20 (about ¥4,800 at ¥1,500/\$) before extra image, tool, or provider usage. This is a planning example, not a guaranteed monthly bill or a final model selection.

6. Account ownership and renewals

- JewelryMallNG should own the Cloudflare, domain, netcup, WhatsApp/Meta, payment, AI, and other production accounts wherever the provider permits.
- Hiddekel Studio receives named, removable access required for setup and support. Credentials are handed over and Studio access can be removed after the project.
- The infrastructure budget is matched to provider receipts. Unused money is credited or returned. Any extra amount is approved before purchase.
- Server and domain renew every year unless cancelled. Usage services continue according to actual activity and provider terms.
- Provider bills do not include a person managing the server. After the included 30-day support period, ongoing maintenance is agreed separately or transferred to the client's administrator.
